

Olga Dudareva

Senior DevOps / Platform Engineer

Barcelona, Spain · osdudareva@gmail.com · [linkedin.com/in/olga-dudareva](https://www.linkedin.com/in/olga-dudareva)

PROFESSIONAL SUMMARY

Senior DevOps/Platform Engineer with 8+ years of hands-on experience designing and operating cloud-native platforms at scale. Deep expertise across the full DevOps lifecycle: GitOps delivery with GitHub Actions and pull-request-driven automation, infrastructure-as-code with Terraform, Kubernetes orchestration with Helm and Istio service mesh, edge security with Cloudflare, comprehensive observability (Prometheus/Grafana stack), policy-as-code, secrets management, and end-to-end CI/CD with rigorous release management. Experienced in Platform Engineering and Developer Experience practices - building golden-path CI/CD workflows, reusable Helm and Terraform libraries. Strong container security background covering image scanning, supply-chain integrity (Cosign/SBOM), and admission control (OPA Gatekeeper). Proven ability to reduce configuration drift, enforce least-privilege security postures, and turn complex multi-cloud environments into reliable platforms.

CORE COMPETENCIES

GitOps & Kubernetes: GitHub · GitHub Actions · GitOps delivery patterns · Argo CD · Kubernetes · AKS · DOKS · Helm · Kustomize · custom CRDs · Istio service mesh · Calico network policies · AGIC / Application Gateway Ingress

Infrastructure as Code: Terraform · Bicep · ARM Templates · Pulumi · Azure · DigitalOcean

CI/CD & Release Management: Azure DevOps Pipelines · GitLab CI/CD · GitHub Actions · quality gates · environment promotion · deployment approvals · change-control automation · release notifications · GitLab Flow / trunk-based development

Security & DevSecOps: HashiCorp Vault · Azure Key Vault · OPA policy-as-code · OPA Gatekeeper · Trivy · Cosign · SBOM generation · RBAC · OIDC/SAML · Keycloak + Entra ID federation · Snyk/SonarCloud/Intruder · vulnerability scanning · Intune / Conditional Access

Platform Engineering & DevEx: Golden-path CI/CD templates · GitOps delivery patterns · observability foundations

Monitoring & Observability: Prometheus · Grafana · Loki · Mimir · Tempo · Pyroscope · Alloy · Microsoft Sentinel · Graylog · Zabbix

Cloudflare: DNS · CDN · WAF · Workers · Pages · R2 · Zero Trust / Access · DDoS protection

Database & Integration: PostgreSQL (HA clusters · Atlas schema migrations) · Azure SQL · Cosmos DB · Valkey · Azure Service Bus · Azure Data Factory · Data Lake Gen2 · Azure AI Search

Automation & Scripting: Ansible · Bash · PowerShell · Python · TypeScript

PROFESSIONAL EXPERIENCE

Homerun Management AG · Senior DevOps Engineer Jun 2024 – Present | Barcelona, Spain
Lead platform engineering for a multi-region, multi-tenant e-commerce & licensing platform running on Azure AKS and DigitalOcean Kubernetes.

- **GitOps & Delivery Automation:** Designed and operated end-to-end GitOps delivery workflows using GitHub as the source of truth - branch protection rules, environment-scoped deployment policies, reusable GitHub Actions workflows, and automated promotion gates across dev/staging/production; enforced pull-request-driven change control with automated status checks, approvals, and audit trails.
- **Kubernetes & Helm:** Managed full Kubernetes cluster lifecycle on AKS and DigitalOcean - node pool configuration, upgrades, RBAC, resource quotas, and network policies; authored and maintained reusable Helm chart libraries for multi-tenant workloads and wrote Kustomize overlays for environment-specific configuration; developed custom CRDs to extend Kubernetes APIs for internal platform tooling.
- **Terraform IaC:** Owned end-to-end Terraform estate across Azure and DigitalOcean - designing and managing the majority of cloud resources (AKS/DOKS clusters, VNets, private networking, DNS, storage, databases, IAM, ingress); built a standardised Terraform module library with remote state

locking and workspace-per-environment strategy, eliminating manual provisioning and configuration drift across all environments.

- **Istio & Zero-Trust Networking:** Deployed and operated Istio service mesh to secure inter-service communication with mTLS enforcement; integrated with OPA policies to control traffic and enforce fine-grained access rules at the service level; used Istio alongside Calico network policies.
- **Cloudflare:** Managed the full Cloudflare platform stack - CDN cache rules, WAF rulesets, Workers, Pages, DNS zone management, R2 object storage.
- **CI/CD & Release Management:** Built Azure DevOps pipeline templates with quality gates (SonarCloud, Snyk dependency scan, Intruder), OPA policy checks, environment promotion approvals; standardised branching strategy and change-control automation.
- **Security & Secrets Management:** Implemented HashiCorp Vault dynamic secrets, Azure Key Vault CSI driver integration; enforced RBAC, workload identity (OIDC), and audit logging across all secret access paths.
- **Identity & Access Management:** Deployed self-hosted Keycloak federated with Azure Entra ID and B2C tenants; configured OIDC/SAML flows, RBAC roles, MFA enforcement, Intune Conditional Access policies, and risk-based access controls.
- **Monitoring & Observability:** Built full-stack observability with Prometheus, Grafana (Loki logs, Mimir metrics long-term storage, Tempo traces, Pyroscope profiling, Alloy collector); created SLO dashboards, and automated Sentinel detections with Logic Apps response playbooks.
- **Container Security & Supply Chain:** Integrated Trivy image scanning into CI pipelines; implemented Cosign container signing and verification, and SBOM generation to enforce a full software supply-chain security posture.
- **Platform Engineering & Developer Experience:** Established golden-path CI/CD templates, reusable Helm chart library.
- **Database & Platform Services:** Managed HA PostgreSQL clusters with Atlas schema migration pipeline; integrated Temporal workflows (TypeScript), Airflow DAGs (Python) event flows into release and operational processes.

EPAM Systems · Senior DevOps Engineer

Nov 2020 – Jun 2024 | Remote

Delivered DevOps and platform engineering services across multiple enterprise Azure client engagements.

- **Terraform & IaC Standardisation:** Led migration from legacy ARM Templates to Terraform + Bicep across multi-environment Azure estates; built a reusable module library and enforced naming conventions, tagging standards, and remote state management.
- **CI/CD & Release Practices:** Designed and maintained Azure DevOps, GitHub Actions, and GitLab CI/CD pipelines with automated testing, SonarQube quality gates, environment-specific approvals, deployment notifications, artifact promotion, and rollback-aware release patterns.
- **Kubernetes & Helm Delivery:** Supported Kubernetes-based application delivery for enterprise client environments, packaging services with Helm, maintaining environment-specific deployment manifests, troubleshooting pods, networking, resource limits, and deployment failures, and integrating Kubernetes releases into CI/CD promotion flows.
- **Azure Data Platform:** Integrated Azure Data Factory pipelines with Data Lake Gen2, Azure SQL, Cosmos DB, and on-premises Oracle; enabled repeatable multi-environment data workflow delivery with parameterised pipeline templates.
- **Operations Automation:** Authored PowerShell/Bash runbooks for VM patching, scheduled start/stop, cost reporting, and incident remediation via Azure Automation; reduced toil and improved operational visibility across multiple tenants.
- **Cross-Functional Collaboration:** Partnered with QA and application teams to shift testing left by integrating unit, integration, and smoke tests into pipelines, reducing manual coordination and post-deployment defects.
- **Mentoring & Knowledge Sharing:** Mentored junior and mid-level DevOps engineers on IaC patterns, pipeline design, and Azure platform practices; ran internal tech-talks and created onboarding guides to accelerate team ramp-up across client engagements.

Digital Design · Systems Engineer (DevOps) Junior → Middle → Senior Nov 2017 – Nov 2020 St. Petersburg, Russia

Progressed through three levels delivering CI/CD, monitoring, and infrastructure automation for on-premises and hybrid microservices environments.

- **CI/CD:** Built GitLab CI/CD and TeamCity pipelines with automated deployments, merge-request automation, and multi-environment promotion; standardised branching and review workflows across engineering teams.

- **Monitoring Stack:** Designed and deployed Prometheus/Grafana/Graylog/Zabbix observability bundle packaged as Docker Compose; enabled rapid rollout of standardised monitoring to new customer environments.
- **Configuration Management:** Automated on-premises Linux (Ubuntu/CentOS) and Windows Server configuration with Ansible playbooks covering OS hardening, application deployment, backup, and DR procedures.
- **Security:** Implemented secure Nginx web server configurations with GOST/RSA encryption and CryptoPro CA; authored SSH tunnel management automation and security hardening scripts.
- **Mentoring:** As Senior, mentored junior team members on CI/CD pipeline design, Linux administration, and scripting best practices; contributed to internal knowledge base and code review culture.

CERTIFICATIONS

- **AZ-400: Designing and Implementing Microsoft DevOps Solutions** — Microsoft
- **AZ-104: Microsoft Azure Administrator** — Microsoft

EDUCATION

B.S. Information Systems and Technologies · Saint Petersburg Mining University · 2015 – 2019
